

Quotient-space reduction

Original space $\pi(\theta)$

fold

Folded space $\pi_F = s \cdot \pi$

FoIT-MCMC pipeline

Stage 1: Train T_F on π_F
SN-RealNVP + OscReg

Stage 2: Quotient proposal
 $q_F(z) = \sum_g q_{T_F}(g \cdot z)$

Stage 3: IMH on D
Accept/reject with h_F

Stage 4: Certify
Quotient-metric LCNF

QC certified lower bound

π_F

cross-mode oscillation removed $\rightarrow$ certified lower bound improves
